

Project Report :-

DIGITAL LITERACY AWARENESS FOR
STUDENTS

Name: Vansh Ahuja

Registration Number: 25BHI10003

Course: B.Tech CSE Health-Informatics

School: SCAI

Course Title: Digital Literacy

Course Code: CSE0001

VIT Bhopal University

DATE: 31/03/2026

Introduction :-

In today's world, digital literacy has become an essential skill for students, as most academic, professional, and personal activities are connected to digital platforms. This project was assigned with the aim of helping students understand and develop basic digital competencies required for effective and responsible use of technology.

As part of this assignment, I worked on multiple tasks that focused on different aspects of digital literacy, such as creating awareness through an infographic, building a professional online presence, exploring coding and collaboration tools, understanding email etiquette, and learning about cybercrime prevention.

This project not only helped me improve my technical skills but also made me more aware of the importance of maintaining a responsible and professional digital identity.

Task 1 Write-up :-

For this task, I created a digital literacy infographic using Canva, which is a user-friendly online design tool. The aim of the infographic was to present key concepts of digital literacy in a simple and visually appealing manner so that students can easily understand its importance.

The design includes sections such as the definition of digital literacy, commonly used digital tools, safe internet practices, professional online presence, and basic email etiquette. I focused on keeping the content concise while using icons and structured layouts to make the information more engaging and easy to read.

One interesting aspect of this task was learning how to balance design and content effectively. It was initially challenging to include all important points without overcrowding the layout, but using Canva templates and design elements helped in organizing the information clearly. Overall, this task helped me understand not only the concept of digital literacy but also how to present information creatively.

Task 2 Write-up :-

In this task, I created and updated my professional digital presence across multiple platforms including GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose in building a strong online profile. GitHub is mainly used to showcase projects and coding work, while LinkedIn helps in building a professional network and presenting academic and career information. Kaggle is useful for learning and practising data science and machine learning concepts.

Setting up these profiles helped me understand the importance of maintaining a professional identity online. I ensured that all the information added was clear, accurate, and relevant to my academic background.

Over the next four years, I plan to regularly update these platforms by adding new projects, participating in coding challenges, and connecting with professionals in my field. This will help me build a strong portfolio that can support my career goals in AI, data science, and healthcare technology.

Task 3 Write-up :-

In this task, I explored both coding and collaboration platforms to understand their importance in academic and professional growth. For the coding part, I used HackerRank and completed a beginner-level problem titled “Solve Me First,” which helped me revise basic programming concepts and understand how coding platforms work.

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” consisting of five questions. The form includes both multiple-choice and short-answer questions to test basic understanding of digital literacy among students. I also linked the form to a response sheet, which helps in collecting and analyzing responses efficiently.

This task helped me realize how these platforms can be used not only for learning and practice but also for collaboration and data collection. In the future, I plan to regularly use coding platforms to improve my problem-solving skills and use tools like Google Forms for surveys and academic projects.

Task 4 Write-up :-

Poor digital communication can often lead to misunderstandings and missed opportunities. For example, if a student sends an email to a professor without a proper subject line or uses informal language, the message may be ignored or taken less seriously. Similarly, unclear or rude communication on social media can create a negative impression.

In such situations, maintaining a professional tone, using clear subject lines, and structuring the message properly can make a significant difference. Respectful communication not only improves clarity but also builds a positive digital reputation. This task helped me understand the importance of following proper email etiquette and being responsible while communicating online.

Task 5 Write-up :-

While researching cybercrime, I was surprised to learn how easily phishing attacks can trick users by mimicking real websites and emails. The level of detail used by attackers to make their messages appear genuine is quite alarming. It made me realize that even a small mistake, like clicking on an unknown link, can lead to serious consequences.

As a result of this task, I have decided to be more cautious while using the internet, especially when dealing with emails, links, and online payments. I will make it a habit to verify sources before sharing any personal information and ensure that I follow safe digital practices regularly.

Conclusion :-

Overall, this project was a valuable learning experience that helped me understand the importance of digital literacy in both academic and real-life contexts. Each task contributed to building a strong foundation in using digital tools effectively, communicating professionally, and staying safe online.

I also learned how to present information in a structured and meaningful way, which is an important skill for future projects and professional work. This project has encouraged me to continue improving my digital skills and to maintain a responsible and professional presence in the online world.
